Improved Staff and Student Service

## Timetable Calendar Service

- + Staff and Students see their timetable in their personal Calendar
- + Calendars are updated automatically when the timetable changes
- + Simple to set up and administer
- + High performance

## Summary

Scientia's Timetable Calendar Service gives staff and students in your institution the ability to view their academic timetable within their personal Calendar.

Changes to the academic timetable automatically update each person's Calendar, so everyone in the institution that is using the service is aware of timetable changes that affect them.

Timetable Calendar Service works with Calendar applications that support Internet Calendaring, and this includes Microsoft Outlook 2007.

## Benefits

### Saving of management time

- ⊕ Timetable changes are automatically delivered to each user's calendar.

### An enhanced service for Staff and Students

- ⊕ Staff and students will love its simplicity and power.

### Assists the smooth running of the institution

- ⊕ Everyone knows where to go, and when.

## Overview and Key Features

### **An Enterprise Syllabus Plus product**

Timetable Calendar Service is available with Enterprise Syllabus Plus and is an Enterprise strength application that can support thousands of users.

### **Uses established calendaring standards**

Timetable Calendar Service uses iCalendar and Internet Calendar subscription, and a number of commercially available Calendar Applications support these standards. Please contact Scientia Support for information on the Calendar Applications that are compatible with Scientia's Timetable Calendar Service.

### **Personal information is not affected**

Each user will already have a calendar to hold personal or business activities such as management meetings. The user's academic timetable is held in a second calendar which the Timetable Calendar Service keeps up to date as changes occur in the overall academic timetable. The personal and academic calendars can be viewed side-by-side or overlaid.

### **Simple to administer**

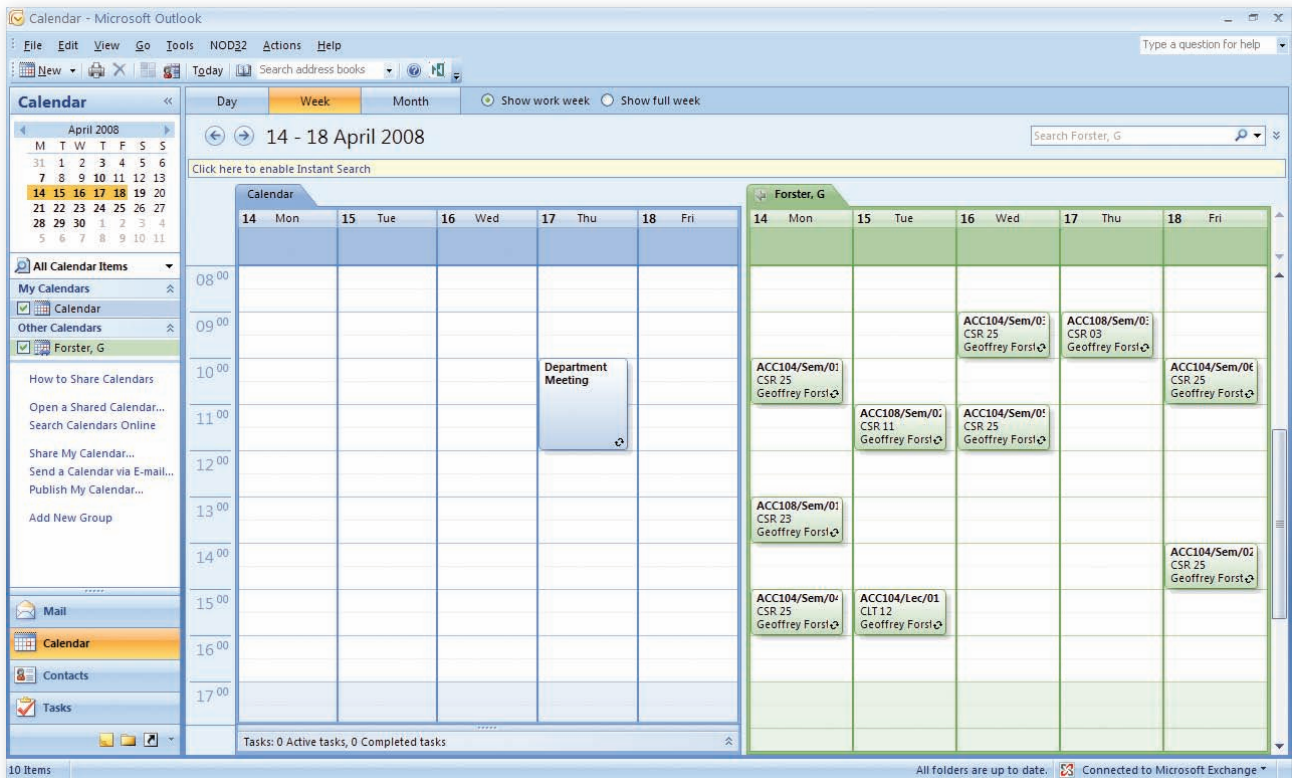

To 'subscribe' to the service and connect to the Timetable Calendar Service, each user selects a personalised URL which opens their Calendar Application and creates the service.

### **Secure**

Timetable Calendar Service only allows the academic timetable to be viewed; activities cannot be moved.

Improved Staff and Student Service

## Technical information

Timetable Calendar Service requires the Reporting Database component of Scientia Enterprise and Version 2 of Scientia Database [SDB2].

The Reporting Database is included in the S+2007 upgrade and an institution can implement Timetable Calendar Service as the first phase of an Enterprise roll-out plan. Version 3.6 of Course Planner, and all subsequent releases of Version 3 Course Planner, will be able to create and maintain the timetable data held in the Reporting Database.

For high numbers of users it is recommended that the Timetable Calendar Service and the Reporting Database are hosted on the same Windows server.
